Dr. Norma Padrón Accepts Industry Advisor Board Vice-Chair Position

Dr. Padrón, Associate Director Main Line Health Center for Population Health Research at the Lankenau Institute for Medical Research, recently accepted the nomination for the IAB Vice-Chair beginning in Jan. 2017. Dr. Padrón's main goal at main Line Health is to translate her work and research into actionable strategies that contribute to the improvement of care delivery models and outcomes for patients. Her research uses novel methodologies to design care delivery and payment models to advance population health and has been funded by government agencies, including the National Science Foundation, the Agency for Healthcare Research and Quality, and private foundations, including the Robert Wood Johnson Foundation, WT Grant Foundation and NYS Health Foundation. She will work closely with Mr. James Gigliotti (IAB Chair) on CHOT-related duties and will serve as an addition liaison between IAB members and Site Directors.
Potential CHOT Site Director from The University of Nottingham Visited Texas A&M University

Dr. Stephen Timmons, Co-Director, Centre for Health Innovation, Leadership and Learning (CHILL) and Associate Professor at the University of Nottingham in the United Kingdom, recently visited the Texas A&M University CHOT site and presented on his research on the National Health System (NHS) in England. The presentation was entitled "The UK NHS; Current Political and Policy Controversies." In addition to the presentation, Dr. Timmons met with Texas A&M faculty and researchers to complete CHILL’s application to become CHOT’s very first international university site.

Efficient Workflow is Vital to Improve Healthcare Value

In a recent CHOT study, researchers at the PSU-CHOT site developed a mixed-methods research approach that provides decision-makers and stakeholders in healthcare with a useful framework for hospitals to improve efficiency and clinician satisfaction by better understanding the complexity of clinical workflow.

Ensuring Responsibility Within Affordable Care Organizations (ACO)

Researchers at the NEU-CHOT site developed a behavioral economics game theory model based on the volunteer’s dilemma to ensure patients receive appropriate levels of care interventions in an ACO setting. The three economic mechanisms the model identified as effective were: 1) reassign interventions to optimistic providers, 2) outsource to
